

SMALL BUSINESS CONTRACTOR WITH
PROVEN ROOFING AND WEATHERPROOFING
EXPERTISE SINCE 1986

National Building Contractors

Problem solving is
at our core.

"If you don't have a reputation you don't have anything."

**—EFFIE ABRAHAMSEN
President**

Historic Restoration Experts >>
Multi-Discipline Capabilities | Gifted Artisans

Technical expertise and a dedication to excellence.

For nearly 30 years, National Building Contractors has been earning a reputation for delivering exceptional performance customers can count on. We've specialized in serving Federal agencies from the VA to the GSA with great success. We pride ourselves on the ability of our dedicated full-time staff and extensive network of subcontractors to solve the most complex problems on difficult projects. Our diverse in-house technical expertise makes us ready to handle any kind of roofing technology, from slate shingles to the latest restoration coatings and vegetated systems. As weatherproofing experts, our capabilities extend beyond the roof, down into the walls and across the entire building envelope.

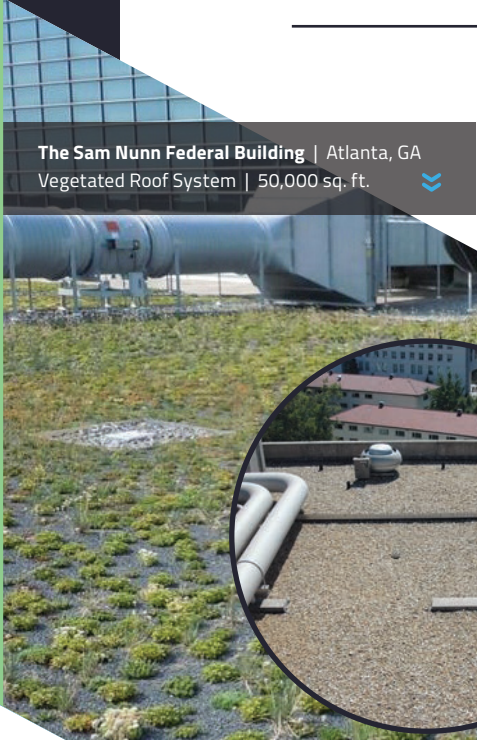

Our record speaks for itself—ask us about our impressive history of past performance.

DEDICATED AND EXPERIENCED EXPERTS

The NBC team has a depth of expertise and problem-solving skills. Unique in the industry, more than half of our project managers and superintendents have been with us for decades. Most of our technicians have been on the crew for at least twenty years, several over thirty. Their collective knowledge has proven invaluable, particularly when formidable problems have appeared, such as an unexplained leak source, complicated structural factors, or delicate architectural elements in need of restoration. Even on more routine jobs, our crews achieve impressive efficiency and superior results because they know each other—and work together—so well.

When your building inventory includes a diverse array of roofing or weatherproofing challenges, NBC is your superior resource. Our capabilities include the ability to repair, maintain, restore and install all types of roof systems, in all types of environments.

We have completed roofing projects ranging in size from 5,000 to 200,000 square feet.

Our dynamic solutions solve complex roofing and weatherproofing problems.

We are equally experienced in the weatherproofing of building exteriors.

PROBLEMS WE'VE SOLVED

- A hospital suffered over a decade of chronic leaks; we solved their problems quickly by identifying and repairing hidden defects concealed under years of structural modifications.
- Sophisticated architectural details were carefully restored within budget for Emory University by restoring clay tiles and repairing the substrate in a hard-to-access environment.
- A range of tricky technical elements and a tight budget were overcome for the VA in Virginia with steep slope, low slope, terraced roofs and intricate architectural details.
- Hundreds of leaks over 15 years at a major health care facility were eliminated when we identified wall flashings as the problem, resolved over 3 years to meet budget parameters.
- Crumbling cornice work was rescued and restored, eliminating a safety risk for a state university.
- Our combination of roofing and waterproofing expertise brought a complex project in on-time and under budget for the VA in Alabama with high-slope, low-slope roofs, slate shingles and intricate copper valleys and gutters.
